Heart with Paw

Created by Lisa Shaw for Embrilliance

A few different styled heart with paw embroidery designs created using StitchArtist by Lisa Shaw of Sew-Bubbles.com

Design Information

- Each design is set to be a one color design - use the embroidery thread color of your choice!

- The BE working files are provided so that you can open into the Embrilliance platform and save the stitch file to your format.

- These are created for the 4x4 hoop. The provided BE file may be sized as you wish and the stitches are recalculated - more motifs are added and the sketch fills are reprocessed by the Embrilliance engine! This is possible because the designs were digitized in StitchArtist and we are providing you our original working file containing the object information!

- If you have StitchArtist, the objects are able to be further modified such as applying your own stitch type properties!

- For a video showing how this object was created using the library shapes in StitchArtist, we have provided a link to our video on our StitchArtist playlist.

- To see how to save the stitch file to send to the embroidery machine, check out this video.

- Our youtube channel with many more video resources can be found at www.youtube.com/Embrilliance
